“BUILDING A PRESENCE FOR SCIENCE IN MASSACHUSETTS”

Purpose

“Building a Presence for Science” (BaP) is the largest networking initiative of the National Science Teachers Association (NSTA) and the foundation of our *~Science Matters~* message to promote scientific literacy in our society. This award winning program has been developed in support of NSTA’s mission in promoting excellence and innovation in science teaching and learning for all.

Building a Presence for Science is NSTA’s largest networking initiative. This award-winning program has been developed in support of NSTA’s mission in promoting excellence and innovation in science teaching and learning for all. Through BaP, teachers of science become aware of professional development opportunities, develop and enhance their leadership skills, and foster collaboration among science education professionals.

To better meet the needs of the approximately 45,000 educators participating in Building a Presence (BaP), NSTA launched a new design of its BaP for Science website <http://bap.nsta.org/sciencematters> -click on “TEACHERS” icon

BaP 3.0 is an internet portal created to provide the BaP community with timely information about professional development opportunities and the latest happenings in the science education community. The enhanced website also provides the user with state specific information about key events and conferences happening locally.
